What's New In Photoshop 2022 (Version 23.2)?

Photoshop offers a huge range of tools for creating and using text, including selection, sizing and rotation, character styles, and more. At the end of this section, you find a chart that lets you know which features are in Photoshop and which are available in InDesign. Adding text to your page A graphic designer's job is to create visuals, not just words. To create a graphic that speaks for itself, be sure to design your text with the image you plan to use. When working with text in Photoshop, you have a variety of choices for how to add text to your design. Figure 4-6 shows a simple design. Notice that the text in the image has been placed with the canvas on its own layer. (See Chapter 9 to get an idea about the different document layers and working with layers.) In the following section, you see how to move a line of text that's already on a layer to a different layer. Creating a new text layer To add the text on the next layer, you first need to create one. The basic steps to create a new text layer are as follows: 1. Open the Create a New Layer dialog box. Figure 4-6: The text that needs to be moved is on its own layer. 2. Choose Create New Fill or Stroke layer. Fill layers are used to apply an even layer of an image or color. When you choose a stroke layer, a line is added to your document, along with the stroke options you set. 3. Set a fill, stroke, or color if you want to change the style of text already present in your document. 4. Type or paste text into the New Layer text box. 5. Type the new layer name in the New Layer Name text box, and click OK. You have now created a new text layer on your page. Layer styles You can modify the appearance of your text — font, size, style, and colors — using an attribute called a Layer Style. Select the type of text layer you want to modify, and then choose Layer → Layer Styles. (See the steps in the previous section to do this.) You see the Fill and Stroke dialog box, where you can select the attributes for your text layer. Note that you see the text layer on its own layer in the lower half of the dialog box (refer to Figure 4-6). The text
