When you're going to hack a computer or server on the Internet, you won't want your IP address to spill out.. So you'll need to use proxy or even chains of proxies to avoid being directly traced by the victim's firewall.. I've just found out that my routers MAC address has now been reverted back to it's original one.. That's because your ISP could easy trace you by two simple information which is the time and IP Address. g Looking up the WiFi's gateway address or using "route print" on the command line).. It is possible that the administrator of the proxy server passes your information to your ISP and you'll still get caught at the end of the day.. If you think you're safe hiding behind a proxy server, bad news is most proxy server has logging enabled and your IP address is definitely listed in the log file when you're connected to it.. The IP address is a set of numbers, and the default depends on your router's manufacturer.. I know this as the router has a sticker on the back with original MAC address, and I've checked this with an arp -a from my PC, they are the same.. To view your network card's MAC address, just run the command "Nov 19, 2015 Technitium MAC Address Changer is a free tool that can change your Media Access Control (MAC) address.. One of it is your network adapter's MAC address Every network card contains a unique code called MAC address that is permanently assigned to it, similarly like every computer requires a unique IP address to be connected to a network.. Getting the router's MAC address can be done by logging into the router's web site oder telnet service, or by executing "arp -a" on the command line after finding out its IP address (e. e828bfe731 [Swinsian 2 2 3 X 2](#)
